WATER REMOVER

APPLICATION:

The accumulation of water in the fuel tank leads to the following problems:

- Corrosion.
- Bad combustion.
- Intermittent acceleration.
- Poor cold starting.
- Decrease in performance.

BARDAHL Fuel Water Remover will overcome these problems.

Compatible with all types of petrol or diesel fuel engines (injection, carburetion, high pressure, turbo, LPG), catalytic converters and particle filters.

PROPERTIES:

- Eliminates water due to condensation in petrol and diesel fuel.
- Protects the fuel system (injectors, pump and carburettor) thanks to its lubricating properties.
- Assists cold starting and protects the engine from corrosion.
- Prevents the formation of rust and deposits in the fuel system.
- Avoids injector and pump seizing on high pressure engines (HDI, TDI,DCI, ...) .

Recommended by all important manufacturers.

INSTRUCTIONS FOR USE:

Before filling up, pour the contents of one can into the fuel tank. One can will treat up to 60 litres of fuel.
