

FUEL INJECTOR CLEANER

DESCRIPTION:

Bardahl Fuel Injector Cleaner is a fuel detergent additive with excellent water dispersion properties. It is designed to combat common injector and fuel system problems that include:

1. Fouled injector nozzles
2. Moisture injector nozzles
3. Fuel line icing
4. Corrosion of the injector nozzles

PROPERTIES:

Bardahl Fuel Injector Cleaner contains a blend of solvents and ashless detergents which act to clean and maintain the cleanliness of port injector nozzles and other fuel system components.

Dispersant Water Dissolving Agents in Injector Cleaner completely disperse small amounts of water in fuel allowing its passage through filters, also preventing it from forming ice in fuel lines and keeping water in fuel tanks to a minimum.

Corrosion inhibitors in Bardahl Fuel Injector Cleaner protect injector tips and other fuel system parts from excessive corrosion.

INSTRUCTIONS FOR USE:

- For fast clean-up of engines showing drivability problems, pour two 300ml bottles into gasoline tank and fill with gasoline.
- To maintain performance add one 300ml bottle every 5.000 km (or more frequently if recurring symptoms indicate deposit build-up). The speed with indicate which deposits build varies with the make of car, gasoline used and driving pattern

CAUTION:

Before use, read carefully safety instructions on packaging or on safety data.

AVAILABILITY:

2101: 24X 300 ML
