

CETANE BOOSTER

AVAILABILITY

REFERENCE 2305
12 X 500 ML

USES:

BARDAHL CETANE BOOSTER has been specially developed in our laboratory to improve the quality of low cetane rated fuels. Indeed, the cetane rate allows to measure fuel combustion quality. The highest the cetane rate, the most flammable is the mixture. This delays the detonation and allows for a more complete and regular combustion of fuel. On the contrary, a low rated fuel will have a low flammability and will burn too quickly, therefore provoking an exaggerated increase of pressure.

PROPERTIES:

A low cetane rated fuel will provoke problems such as engine noises, excessive exhaust smoke and gaz emissions and loss of power, in addition to engine damage.

BARDAHL CETANE BOOSTER has the following properties:

- Increases the cetane rate by up to 5 points, depending on the quality of fuel.
- Improves fuel combustion and avoids early clogging of engine.
- Improves power and engine performance.
- Eliminates pinking and poor detonation.
- Makes cold starting easier.
- Reduces fuel consumption and exhaust smoke.

INSTRUCTIONS FOR USE:

Pour contents of one can into fuel tank before filling in.

One can treats 50L of diesel.

WARNING:

BARDAHL CETANE BOOSTER is compatible with all types of diesel engines, catalytic converters and particle filters.
